Executive Summary

Zuzube is an escorting service that will combine screening, booking, and payment in a single platform. Zuzube offers an advanced companionship experience to a trusted customer and verified escorts who value discreet, secure exchanges. Unlike other competitors, Zuzube offers a single meeting place for screening and arranging a date. This enables us to offer security, comfort, peace of mind, and reduced costs. Escorting as a high-risk profession which contains numerous inefficient business practices. Various steps should be taken by the customer and providers so as to plan a date and to provide security as well as discretion on both ends. Zuzube offers an exquisite solution to these issues by offering search, screening, booking, and payment services in a secure, easy-to-use platform. Zuzube has been organized to avoid regulation by being extra-jurisdictional, ensuring it can operate in any jurisdiction, even those cities, and countries which are not friendly to the escort business in any region.

Introduction

In the world where the modern person's life is so dynamic, the key element of the Zuzube application is to quickly find a partner and meet all the user's desires.

With regards to escort dating advertisements, many people will concur that phony is commonly an unwanted characteristic for the concept. Participants face the likelihood of meeting somebody they weren't anticipating.

Another issue, to be specific frail cybersecurity and centralized framework, prompts hacker attacks and to accessibility for the police that imposes a risk of individual information.

To make better experiences and at last better escort service, a total rebuild of the escort ads sphere is important. In the following sections we spread out how, with a decentralized framework, we can boundlessly enhance the escort experience.

The Escorting Market Space

Escorting and sex-related services are assessed to be over \$157B every year around the world, with at least \$10B every year in North America alone. Regardless of the size of this market, there are no vast national or universal agencies or platforms. The main alternatives for escorts are to either work independently and handle everything all alone, or work with little single-location agencies which take as much as 40% in charges. Independent operation is extremely risky and wasteful. Escorting is intrinsically an inefficient, divided market, given the various steps that should be executed by both the client and escort so as to ensure a successful date.

For instance, clients often invest a lot of energy searching for and communicating with escorts to locate an appropriate match, over giving individual data to guarantee the escort's safety. Escorts should then spend time inquiring about the client through different methods (Google, references, social media etc.) so as to guarantee the client is safe. Before a date even occurs, both the client and escort have gone through a few hours attempting to arrange a date. The Zuzube Escorting Platform offers a safe, secure and low-cost solution to all those concerns, issues and wasteful aspects. Our platform is designed, poised and ready to end up a market player.

Since the Internet is much lucrative and easier. Moving advertising from the street to the data superhighway also enables pimps and escorts better manage the physical risks of the business. "Throughout the years, right, the Internet turned into a less demanding approach to motivate cash without taking such huge numbers of risks similar to injury, or assholes outside." "No one can tell what happens around evening time. Around 18 percent of pimps said their biggest dread was for their own security. ZUZUBE WILL BE THE UBER OF ESCORT

Blockchain Auditing

To reassure investors that Zuzube is accurately accounting for revenue, Zuzube will provide a blockchain-based auditing procedure. The technology is similar to Certificate Transparency, or could be called a Single-Issuer-Blockchain. After each date, a digitally signed code is provided to the client and provider in the Zuzube app. The code contains the amount of Zuzube's share of the transaction. Each month, Zuzube will publish another block on its Single-Issuer-Blockchain containing a tree of all the codes issued for completed dates that month. This allows investors to see how much revenue Zuzube is recording. Information leak is reduced by monthly blocks while still being frequent enough to be useful for auditing. To ensure Zuzube records every date, a bounty system will be created, offering a high reward for producing any code not included in Zuzube's auditing blockchain. Zuzube will build this functionality into its app directly, but it is assumed that third parties may also offer verification services. As the codes and blockchains are publicly verifiable, any missing code can trivially be checked by any third party, requiring Zuzube's platform to always accurately record revenue.

How Does Zuzube Work?

Zuzube is a decentralized Blockchain-based platform. It offers a secure payment method for dating/escort services and fastest-growing social network.

As an advanced innovation, it is designed to connect clients to their desired escorts.

To get started on Zuzube, you need to install the app on your smartphone and create an online zuzube account. The app will require you to provide information about yourself.

Zuzube is a global social platform which opens opportunities for communication, photos, and video sharing, as well as a revolutionary function of sending payment using cryptocurrency with just a single click.

The Zuzube Escorting Platform

The Zuzube Escorting Platform integrates detailed search, booking, payment, and screening into a single, user-friendly interface. Users can be able to input detailed search, browse all the available escorts, and make “Instant Book” requests. Escorts will read clients’ screening information, offer accessibility beforehand, and accept payments. Both parties will have the benefit of quick, efficient interactions, saving time and money in the process.

Clients will scroll through profiles and swipe right to match, similar to other dating apps. The careful profile views contain the escort’s description, rates, and booking capabilities.

Why Zuzube?

Zuzube is quickly becoming the premier choice for quality companionship dating, and provide a number of benefits to clients, and escorts.

Escorts

Zuzube is the premier choice for escorts to conduct business. We provide:

- One platform that integrates shopper screening, booking, payment, and advertising.
- We tend to cut back the price of client acquisition and reduce the time required to screen clients by 70%.
- Inflated visibility to purchasers thanks to our giant advertising budget and reach across several online and offline platforms.
- Booking fees of only 20% on Zuzube versus 40% with typical agencies.
- The flexibility to just accept payments in cryptocurrency, improving privacy and reducing scrutiny on transactions.

Clients

One area unit the times of wasted time with back and forth messages, and with insecure information transmission.

Zuzube provides many important benefits for clients, including:

- Fun, fun-to-use swipe interface for easy browsing, searching and selecting.
- On-line calendar schedule shows associate degree escort's convenience at-at-glance.

Quick and easy one-click scheduling with immediate confirmation.

- Constitutional payment system permits payment by money or via cryptocurrency permits namelessness, reduces payment friction.
- Clients are pre-verified for use worldwide.
- A web-based platform provides privacy and security as a result of there's no actual app to transfer.

Product Development Technologies

Zuzube is the escort dating service that employs the newest identification algorithms and intelligent search algorithms for successful and safe escort around the globe.

A quick search for partners

- Observe the likable girls near your location.
- Chose one of them to want to meet now.
- Automatic verification of girls
- Person recognition technology: face, Iris, fingerprint combinations.
- Decision-making system.
- An accounts verification through private blockchain based on other users opinion.

Secure data storage

- Database secured storage on distributed servers.

It is essential for users to be real.

Thus, we've enforced automatic verification procedure for women and may extend it for men.

Even though it will be self-addressed with face recognition algorithms and alternative and disputes resolved with moderators, there is no way to make users accounts more trustful.

That is why we have a tendency to set a goal of actual user identification

Strategy

Product development and scaling will be done systematically.

When setting market priorities, we have a tendency to admit analytics primarily: market size and outlook, audience size and financial condition, users involvement and participation in online activities (include social media and alternative dating services).

Zuzube Escort Token

Our token is based on ERC20 Ethereum. Token will be issued as 150.000.000 Zuzube tokens.

Dividend model

70% for private sale tokenholders

55% for public tokenholders

Roadmap

Product Timeline

Q1 2019	The team completes a Beta version of the Zuzube Escort application and opens it to tester community to gather initial feedback. The Beta includes the following features: localized searching, encrypted data storage and identity verification via face, iris, fingerprint scan technology, account area.

Token Sale

Law Enforcement and Regulatory

Considerations As a platform supplier we attempt to stay our distance from violating native and in-country laws and rules. Our verification method verifies that no underage persons square measure concerned.

However, it will be impossible to totally comply with the myriad of laws everywhere since regulations and levels of enforcement vary by country, province and even cities.

In some areas, the Zuzube business model might be considered illegal and/or unwelcome.

That's why we've been structured as associate degree anonymously-operated team, using distributed and encrypted servers in remote locations with hidden databases.

All of our technology has been designed, programmed, managed and hosted in-house. No public cloud servers like Google Cloud or Amazon Cloud square measure utilized.

All communications square measure encrypted and operations square measure a closely-guarded secretly.

With the exception of the set of founders WHO do understand one another, no person or contractor knows any of the others involved.

Token Supply and Specifications

Approximately a hundred and fifty million tokens are going to be issued and outstanding on the Ethereum blockchain employing a good contract. The Zuzube Platform (ZEP) token will comply with ERC-20 standards and will be freely transferable on the Ethereum blockchain.

ZEPTokens can represent shares of the corporate and can offer the holder of those tokens the correct to redeem dividend payouts. ZEP tokens is also tradeable on redistributed exchanges (to be announced). Zuzube is reserving 170 million token shares as a treasury. These don't seem to be outstanding and don't increase the market cap.

These token shares will only be distributed in the future if Zuzube needs to perform a secondary offering, for example, to facilitate large acquisitions. Any Pre-ICO or ICO tokens not sold-out are going to be burned, that is, taken out of circulation, that reduces the whole range of outstanding shares, and will increase the worth of issued shares sold.
